## INTRODUCTION

Of all the occupations that are touched by the use of tobacco products – from tobacco farming, manufacturing, advertising, epidemiology, cancer treatment or undertaking – the one the smoker is in most frequent contact with is retailing. Most smokers visit a retail store a few times a week to buy cigarettes and other household goods, providing a hundred or more moments of contact over a year. By contrast, smokers visit their family physician only once a year on average.<sup>1</sup>

The relationship between the retailer and the smoker is one that is defined by two sets of opposing forces. On one side are the efforts of the tobacco industry to generate sales and to use the retailer as a point of persuasion with smokers. On other side are the rules set by public health authorities to restrict the forms that the industry's efforts can take.

Navigating the space between these two forces is the retailer, whose livelihood depends on selling goods (including tobacco) and for whom the economic incentives are currently aligned with making as many tobacco sales as possible. There are no rules against tobacco companies spending money to influence retailer behaviour and there are virtually no economic incentives for retailers to work towards public health goals.

Tobacco companies invest heavily in their relationship with retailers and continue to adapt their retail marketing strategies to work in the “dark market” environments of Canada, Australia and other jurisdictions where overt and visible tobacco promotions have been almost entirely removed. In Canada the companies have designed new structures and programs to increase their influence with retailers: eliminating wholesale distribution to establish more control over local ordering and pricing, implementing preferential pricing to reward compliant retailers, and establishing loyalty programs and other incentives to reward retailers who sell more cigarettes or who promote certain tobacco products.<sup>2</sup> All of these activities are legal – few have provoked a public health response.

If retailing is a blind spot in Canada's tobacco control programs, it is one we share with many other countries. Many national tobacco control strategies follow international standards, such as the Framework Convention on Tobacco Control, the Bloomberg-funded MPOWER measures, or the European Union Directive. None of these offer a model for tobacco retail management. This is in contrast with international guidance on comparable health concerns like alcohol, where the World Health Organization recommends a range of supply-controls, like minimum pricing, government retail monopolies and retail licensing.<sup>3</sup>

To address this weakness, many in the tobacco control community are looking at the retail environment as an area where public health controls could more effectively be established and where industry controls could be weakened.

This paper aims to bring together information on controls on tobacco retailing that have been implemented in developed countries. It also looks at controls adopted for other harmful consumable goods sold in Canada. The intent is to accelerate discussion in Canada and elsewhere on ways to better align the retailing of tobacco products with public health goals.

## Observations

This scoping exercise has identified the following considerations for Canadian efforts to reform tobacco retailing:

- **The density of tobacco retailers in Canada is among the lowest in the world.**  
This has largely been achieved by reducing the locations where tobacco products can be sold rather than restricting the number of licenses that can be issued.
- **Tobacco retail licensing is not managed by Canadian governments as a health strategy**  
Almost without exception, where retail licenses are required in Canada they are issued and controlled by finance ministries. Experiences in other jurisdictions and/or with other products show that retail licensing of tobacco and vaping product sales could be used much more effectively to achieve public health purposes. Examples of regulatory measures include:
  - Impose a high licence fee to increase prices and further reduce the number of outlets
  - Use the proceeds from the licence fees to defray the costs of tobacco and vaping control
  - Require adult-only, vaping-only and tobacco-only stores
  - Require that products not be on visible display
  - Require health warning signs in retail stores
  - Restrict or ban online retailing
  - Restrict advertising in retail locations
  - Require training for retailers so that they can competently offer basic health advice and direct customers to smoking and vaping cessation services
  - Allow only trained personnel to dispense tobacco and vaping products
- **Many retail restrictions imposed in Canada on cannabis and/or alcohol distribution are not yet applied to tobacco.** These include:
  - Requirements that products be sold in specialty stores
  - Requirements that products be sold in age-restricted stores
  - Public controls over wholesaling
  - Standardized pricing at the wholesale or retail level
- **Tobacco and vaping product manufacturers have too much control over retailers in Canada.** This is not the case in other jurisdictions. Canadian governments at all levels should work together to reform tobacco and vaping retailing so that retailing serves public health purposes, not corporate profit-making purposes. Here are some suggestions based on experience elsewhere and/or experience with other products.
  - Prohibit contracts between retailer and suppliers of tobacco and vaping products
  - Establish wholesale monopolies with public health purposes. Give them the authority to direct and incentivise retailers to achieve public health goals. Similar systems exist for cannabis distribution in several province, although their public health protection mandates are weak

**Table 1: Available retail interventions<sup>4</sup>**

Measure	Precedent
<b>Licensing and license fees</b>	
Mandatory licensing / registration	Most Canadian provinces, Scotland, Ireland, etc.
Licenses issued by health authorities (not tax authorities)	A few Canadian jurisdictions, Finland
License fees greater than a nominal amount	Several jurisdictions (i.e. Ottawa, France)
License fees linked to regulatory costs	Finland, some Canadian cities
License fees intended to support tobacco control programming	Lethbridge
License approval required from health authorities	Iceland
Community consultation before issuance of license	Many Canadian provinces (alcohol)
Financial incentives for retailers who stop selling tobacco	France
Restricted number of licenses/retail density	France, San Francisco
<b>Restrictions on locations</b>	
Restriction on number of outlets	France, Hungary, San Francisco, others (tobacco)
Product-restrictive outlets (most other goods not for sale)	Austria, Hungary (tobacco)
Product-exclusive outlets (other goods not for sale)	Most Canadian provinces (alcohol, cannabis)
Prohibiting Sales Near Youth-Populated Areas (near schools)	(phase in- Philadelphia)
Retailing banned in health care settings	All Canadian provinces
E-retailing banned	Quebec
Retailing banned in colleges and universities	Most Canadian provinces
Bans on sale in pharmacies	Most Canadian provinces, some U.S. cities, Europe
Ban on tobacco retail sales	Beverly Hills
<b>Conditions of license</b>	
Government approved training of retailers	France (mandatory), Newfoundland (voluntary)
Limits on hours of day that it can be open	Many Canadian provinces (alcohol)
Licenses to individuals only, not businesses	France, Austria, Italy, Spain
Mandatory signage (quitlines, health information, sales to minors)	Many Canadian provinces
Availability of quit smoking materials at retail	Estonia
Price controls (standardized pricing for all brands)	France, Brazil, Japan require brands be sold at same price in all stores
<b>Other</b>	
Age-restrictions to enter store	Canada (cannabis and vaping), Hungary (tobacco)
Customer required to have contact with health professional	Prescription medicines
Ban on manufacturers' incentives to retailers	Quebec (partial), France, New Zealand, Ethiopia
Vertical integration between retailer and manufacturers banned, including through government-managed wholesaling	France (tobacco), Iceland (tobacco)
Sales data provided electronically to government	Quebec (restaurants); B.C., Alta., Sask (First Nation tax-free tobacco)
Retailer payment based on performance objectives other than volume sales	Canada (Post Office)
Programs to help retailers diversify to other goods	France
Ban on contracts between manufacturers and retailers	Some restrictions in European monopolies
Litter abatement fee recovered through retailer licence	San Francisco
Retailers incentivized to encourage smokers to quit	
Ban on visits to retailers by tobacco manufacturers sales representatives	

<sup>4</sup> See fuller description of measure in each geography for sources.

## PART 1:

### A) TOBACCO RETAILING IN CANADA.

#### FEDERAL AND PROVINCIAL REGULATIONS AFFECTING TOBACCO RETAIL PRACTICES

The taxing and health regulation of tobacco products falls in the jurisdictional authority shared by Canadian provinces and by the federal government. The federal government has the authority to use its criminal law powers to protect health and safety, and the provincial power over property and civil rights gives provincial governments authority over businesses or professions within the provinces.<sup>5</sup>

As a result, tobacco control laws are found in 14 jurisdictions (10 provincial, 3 territorial and 1 federal). These are complementary approaches, with occasionally overlapping provisions. The Quebec *Tobacco Control Act*, for example, regulates the minimum size of federal health warnings. The federal government has a minimum age for sales, which is set at a higher age in several provinces. Both federal and provincial tobacco laws have banned the sale of flavoured or menthol tobacco products, with somewhat different applications.

One area within the traditional provincial sphere of influence is retail licensing. Although the federal *Tobacco and Vaping Products Act* anticipates retail regulation, it is largely under provincial laws that retail conditions are set. Municipal governments, which act under the authority of provincial law, have some powers to set additional measures, such as the issuance of business licenses and the charging of fees for them.

#### Federal pricing policies

One area of federal jurisdiction which impacts retailing is competition law. Until 2009, the *Competition Act* banned manufacturers from discriminating between retailers with respect to price and availability of product. Changes to that law which implemented the recommendations of a federal Competition Policy Review Panel to make discriminatory pricing strategy a practice which could be reviewed by the Competition Tribunal, but no longer a criminal offence.<sup>6</sup> The 2009 budget implemented these changes,<sup>7</sup> and the Competition Tribunal ruled that subsequent pricing practices of tobacco manufacturers (charging some retailers more than others for the same product) were acceptable under law.<sup>8</sup>

#### Federal requirements of tobacco retailers

The federal *Tobacco and Vaping Products Act* includes requirements that retailers post signs regarding sales-to-minors provisions and gives the federal government the authority (never exercised) to regulate the way that tobacco products are displayed. It expressly authorizes retailers to post signs that indicate the availability and price of products but bans the display of advertisements at retail.<sup>9</sup>

There are no federal requirements, either under health or tax law, for licensing of tobacco retailers. The Federal *Excise Act* licenses manufacturers and raw leaf dealers.<sup>10</sup>

## Provincial and territorial requirements of retailers who sell tobacco products

Each of Canada's provinces and territories has adopted legislation to regulate the sale of tobacco products, with significant differences in the scope and detail to these approaches.

- **Bans on sales to minors**

The federal law, which applies where provincial laws have not been set, sets the minimum age at 18. Six jurisdictions have set the minimum age at 19. Prince Edward Island raised the minimum age to 21 in November 2019, with the measures coming into effect in March 2020.<sup>11</sup>

- **Bans on displays at retail.**

Provincial governments augmented federal restrictions on tobacco promotions by banning the display of tobacco products at retail outlets. The first of these bans was adopted by Saskatchewan in 2002 (implemented in 2005), and the last was in Newfoundland in 2010.<sup>12</sup>

- **Signage at retail**

Each province and territory requires the posting of signage at retail, and constrains the use of price signage. These restrictions vary from province to province. In Ontario, for example, the brand names cannot be displayed, although they can in the neighbouring province of Quebec.

- **Restrictions on places where cigarettes may be sold.**

Each province and territory has banned the sale of tobacco products in certain types of locations, although there is considerable variation in the choice and description of these venues. All but one has banned the sale in pharmacies. The venues where tobacco products may not be sold are identified in the table 3.

- **Manufacturer-retailer promotions**

Most tobacco laws in Canada do not include advertisements or promotions directed at retailers in the general prohibitions against tobacco marketing. Tobacco companies are permitted to place ads in retail trade publications, to host events for retailers and to otherwise promote their brands. One province, Quebec, recently (2015) prohibited "rebates, gratuities or any other form of benefit related to the sale or the retail price of a tobacco product to operators of tobacco retail outlets, including their employees." <sup>13</sup>

- **Reporting requirements**

The Smoke-Free Ontario act obliges wholesalers and distributors to submit reports to the Minister if required by regulation. <sup>14</sup> There are currently no reporting requirements.

- **Retailer training**

Mandatory retailer training is required of retailers in Nunavut,<sup>15</sup> is provided for by Alberta legislation (but not yet in force)<sup>16</sup> and on-line training is offered in Newfoundland.<sup>17</sup> Newfoundland offers training for tobacco retailers and their employees through its SKILLSpass portal.<sup>18</sup>

### **Municipal requirements of retailers**

The power of municipalities to control local commerce vary from province to province. In most provinces, for example, municipalities had the authority to ban smoking in bars and restaurants even if provincial smoke-free laws were not in place. This was not the case in Quebec.

Some municipalities have implemented requirements for tobacco retailers to be licensed and to pay licence fees, as discussed below. None are known to have imposed limits on the number of retailers or on the locations of retailers.

### **Provincial and municipal licensing of tobacco retailers**

Some of Canada's 13 provinces and territories require that retailers be licensed, but such permits are issued by the finance ministries for tax-collecting purposes and are not, generally speaking, linked to any specific health objective. Only two provinces charge fees for these licenses, and these are only nominal charges (\$50 per year or less). Even when licenses are issued by finance ministries, they can in some cases be suspended or cancelled for breach of tobacco control regulations, such as sales to minors.<sup>19</sup> In other cases retailers can be prohibited from selling tobacco for repeated infractions of tobacco control laws, even if the license is not cancelled.<sup>20</sup>

About 20 municipalities charge tobacco retailers an annual license fee, usually as part of a schedule of fees for businesses for which the municipality incurs inspection costs. Some municipalities have linked these fees or permits to health objectives. The City of Lloydminster (which straddles the border between Alberta and Saskatchewan) has among the highest annual retail license fees: \$1,100 for retailers who sell flavoured tobacco products and \$750 who only sell non-flavoured tobacco. The by law specifies that "Funds collected from this fee will be used to support local agencies with tobacco reduction strategies."<sup>21</sup>

### **Provincial requirements on tax-free sales to First Nations**

Provincial cigarette taxes are not applied on the sale of tobacco products to qualified Indigenous Canadians. Specific controls on First Nations and On-Reserve retailers are imposed by some provincial tax ministries:

- The government of Saskatchewan requires retailers to submit their sales electronically using point of sale recording systems and imposes limits on the amount that can be purchased by one individual (equal to one carton per week).<sup>22</sup>
- British Columbia requires that each sale to an eligible tax-exempt purchaser is logged, including with the individual's name and the quantity purchased and submit these forms to government.<sup>23</sup>
- Alberta requires vendors of tax-exempt tobacco to provide weekly reports using electronic point of sale system (AITE Direct).<sup>24</sup>

**Table 4: Provincial licensing requirements for tobacco and nicotine**

Province	Tobacco	Nicotine
<b>British Columbia</b>	Tobacco retailers are required to have a Tobacco Retail Authorization. (TRA). It can be suspended or cancelled for infractions under the <i>Tax Act</i> or the <i>Tobacco and Vapour Products Control Act</i> . <sup>39</sup>	Retailers must effectively be registered with government to sell vaping products. They must provide 6 months notice before starting to sell nicotine products and must file annual reports. <sup>40</sup>
<b>Alberta</b>	“Alberta retailers are generally not required to register or be licensed with the Government of Alberta to sell tobacco, unless they are located on a reserve or are a duty-free shop.” <sup>41</sup> Municipalities may require business licenses and several have done so. <sup>42</sup> The City of Edmonton notifies Health Canada when a permit for Tobacco Sales has been issued. <sup>43</sup>	No requirements
<b>Saskatchewan</b>	No specific retail licence required by the province.	In April 2020, Saskatchewan’s budget included a tax on vapour products, which requires retailers to have a Vapour Product Tax License. <sup>44</sup>
<b>Manitoba</b>	Tobacco retail dealer’s permits issued under authority of <i>Tobacco Tax Act</i> . <sup>45</sup>	Conditions set for qualifying as a specialty vapour product shop, but no license required. <sup>46</sup>
<b>Ontario</b>	Tobacco Retail Dealer’s Permit is required under the <i>Tobacco Tax Act</i> . <sup>47</sup> There is no cost to the retailer. Specialist tobacco shops must be registered with the local board of health. <sup>48</sup>	Specialty tobacconists and specialty vape shops are required by the Smoke-Free Ontario Act to be registered with the local public health unit. <sup>49</sup>
<b>Quebec</b>	Tobacco retailers must be registered with the tax authorities, in the same manner as other businesses. <sup>50</sup>	Nicotine vendors must register with the Health Ministry. <sup>51</sup>
<b>New Brunswick</b>	New Brunswick tobacco retail licenses are issued under the authority of the <i>Tobacco Tax Act</i> , expire each year and are location specific. <sup>52</sup> The initial fee is \$100, the renewal fee is \$50.	No requirements.
<b>Nova Scotia</b>	Retail Vendor’s Permits are issued by the provincial tax commission. The permit expires after 3 years unless renewed. The fee for the 3 year license is \$124.60. <sup>53</sup>	In 2020, Nova Scotia implemented requirements for vapour product retailers to be licensed. The cost is the same as for tobacco. <sup>54</sup>
<b>Prince Edward Island</b>	A Tobacco Retail Vendor’s License is issued by the finance ministry, but requires prior inspection of signage and approval from the health ministry. <sup>55</sup>	No requirements

## THE NUMBER OF TOBACCO RETAILERS IN CANADA

There are no official statistics on the number of retail outlets where Canadians can purchase tobacco products, and the only provinces known to have periodically made the number of registered retailers available to researchers are Ontario and Quebec. Health Canada currently estimates that there are “30,000 to 35,000 points of sale for tobacco products across Canada” but does not provide the basis of this estimate.<sup>78</sup>

The tobacco trade has provided (unverified) statistics on the number of retailers, and private estimates made by the companies in previous years have been made public as a result of litigation. These industry estimates suggest that the number has fallen dramatically in recent decades:

- In filings submitted to the Ontario Superior Court, the companies reported as follows: “approximately 28,000 retailers” (JTI)<sup>79</sup>, “approximately 26,825 retailers and 184 wholesalers” (ITL) of which 9,236 stores are in Ontario.<sup>80</sup>
- The Canadian Convenience Store Association Annual “Facts and Figure Report” said there were 26,519 convenience stores in 2016.<sup>81</sup>
- In a web-page mounted in 2015, Canada’s leading tobacco manufacturer reported that it provided its products to 29,000 retail outlets.<sup>82</sup>
- In 2006, prior to the ban on sale of tobacco products in bars and restaurants in Quebec, Rothmans, Benson and Hedges estimated that the number of outlets in Canada was 33,000<sup>83</sup>
- Six years earlier, in 2000, in an official court document, Imperial Tobacco claimed that “Imperial’s tobacco products are sold in nearly 40,000 retail outlets throughout Canada.”<sup>84</sup>
- In a 1976 internal document, the Canadian Tobacco Manufacturer’s Council reported 90,000 retail establishments as well as 40,000 cigarette vending machines for a total of 130,000 retail outlets.<sup>85</sup>

Based on these estimates, the density of tobacco retailing has fallen from 383 outlets per 100,000 people in 1976, to 130 outlets per 100,000 Canadians in 2000 to 75 outlets per 100,000 people in 2019.<sup>86</sup>

As dramatic as these numbers are, they are plausible within the lived context of the past 40 years. Until this century, cigarettes were sold in an extensive system of services - restaurants, bars, barber shops, bowling alleys, hotels, movie theatres, snack trucks, department stores, corner stores and other retail outlets. Today, they have virtually disappeared from all hospitality venues and from all retail outlets other than convenience stores, grocery stores, and gasoline stations.

Statistics Canada’s estimate of the number of businesses operating in Canada is reasonably consistent with ITL’s claims of 26,825 tobacco retailers outlets. The number of retailers with employees of the type which

86 Canadians population estimates, Statistics Canada, CANSIM 051-0001. Population in 1976=23,44,808; in 2000 = 30,685,730, in 2019 = 37,589,262.

continue to sell cigarettes (grocery and convenience stores, gas stations, pharmacies in British Columbia) totals 26,590.<sup>87</sup> If cigarettes were still sold in all pharmacies, bars and restaurants, as they were in the early 1990s, there would be almost 4 3 times as many outlets as Imperial Tobacco currently says there are (103,509 instead of 26,825).

While industry estimates will be based on the number of retail customers they sell to (which has been made more certain with the current system of direct-to-store delivery), government estimates are based on the number of registered or licensed retailers.

The quality of industry and government estimates and their usefulness for assessing retailer density is an issue requiring attention. It is possible for retailers to maintain a licence and be included in government registries, even though they have stopped selling tobacco products. (A licensing system that attaches a notable cost to the registration may encourage retailers to relinquish licences that were held even though cigarettes were no longer being sold, giving the appearance of a greater reduction in the number of retailers than has actually occurred.) It is possible that retailers are operating without being registered, or that their registration was not properly recorded. One recent study “ground truthed” government estimates against personal observations in a sampled region, finding that 98% of those on the list sold tobacco products and that 88% of those who sold tobacco products were on the list (the remainder were in “recently built developments” and the study was conducted with data that pre-dated the field work).<sup>88</sup>

The number of tobacco retailers reported for the province of Ontario has fallen by more than a third (from 14,000 to 9,200) between 2006 and 2019.<sup>89</sup> Ottawa, which has one of the highest tobacco retail licence fees in Canada (currently \$909 per year<sup>90</sup>), saw a somewhat larger drop (from 669 stores in 2008 to 404 in 2019).<sup>91</sup> In the first 5 years of Quebec’s ban on selling tobacco products in bars and restaurants, the number of tobacco retailers fell by more than half (from 19,500 to 7,500).<sup>92</sup>

Tobacco control regulations may have contributed to this decrease in intensity by pushing or nudging tobacco retailers out of this line of business.

- *An increase in the number of places where cigarettes may not be sold by law*  
All but one Canadian province has banned the sale of cigarettes in pharmacies and many have designated other spaces where tobacco may not be sold, as shown earlier. These bans were introduced between 1994 and 2016.<sup>113</sup>
- *An increase in the number of places where cigarettes may not be smoked.*  
All Canadian provinces have banned tobacco smoking in public places, including bars, restaurants.<sup>114</sup> There is no longer the expectation that proprietors of these establishments sell cigarettes as a convenience to their customers, and most appear to have ceased doing so.

Nonetheless, the sale of tobacco products remains ubiquitous in Ontario, especially so in neighbourhoods with high levels of deprivation. More than half (65%) of tobacco retailers were found to be located within 500 meters of a school.<sup>115</sup>

Other factors may also have contributed to a reduced market for tobacco products in legally operating retail stores. In addition to the formal retail market, there is a large and relatively undocumented informal market for tobacco products in Canada. In Ontario and Quebec, tobacco products (mostly cigarettes) are produced on a few indigenous territories in and sold through “smoke-shacks” and other distribution channels that do not involve storefronts.<sup>116</sup> Some health researchers do not support the view that the contraband market has increased over the past decade, estimating that the illicit market for tobacco products in 2016 was about 10% of the total market.<sup>117</sup>

### Comparison of retail density

Despite the steady decrease in tobacco retailer density in Canada, there are many more tobacco outlets than there are for other distribution services in Canada.

**Table 7: Number of Canadian retail distribution outlets<sup>118 119 120 121</sup>**

Retail service	Year	Number of outlets	Density per 100,000 population <sup>122</sup>
Tobacco retailers	2018	26,825	72

### Density by population and physical size of community

The density of a population within a geographic area may influence the number of retailers that are required to service a given population. The circumstances of people living in a central metropolitan area may not be the same as for those living in remote or rural communities, for example.

We are not aware of any detailed estimates of the number of tobacco retailers by community size, but data on convenience store presence may be used to compare the density of outlets by community size. The Canadian Convenience Store Association made available information for 2016 on the presence of retailers in Metropolitan (cities over 100,000 people), urban (1,000 to 99,000 people and density of at least 400 residents per square kilometer) and rural (other populations). This information is shown in Table 8, and the density and proportion of convenience stores in each community size is shown in Table 9.

**Table 8: Number of convenience stores and residents by community size and province**

## B) E-CIGARETTES AND VAPING NICOTINE

Until May 2018, it was illegal to sell vaping products which contain nicotine in Canada. Despite this prohibition, specialized vape shops had appeared in most Canadian cities. Although these stores were not selling products legal for sale, many may have been businesses lawfully registered under provincial or municipal regulation.

- In 2016, the Canadian Vaping Association estimated that the number of stores exceeded 500.<sup>125</sup>
- In 2019, following the legalization of e-cigarettes, the market research agency EcigIntelligence estimated that there were 1,100 brick and mortar vape shops, with about 300 in Quebec and 350 in Ontario.<sup>126</sup> By this point, these products were also available in convenience stores, while continuing to be available in specialty vape shops. Many provinces which banned displays of vaping products in convenience stores, permitted them in specialty vape shops.
- Industry sources report that “Alberta has over 130 specialty vape retailers in the small business sector.”<sup>127</sup>
- Quebec’s Institut national pour la santé publique du Quebec reported that in early 2019 there were 299 specialty vape stores in that province, or 3.5 such stores for 100,000 people.<sup>128</sup>

## Licensing and registration of specialty vape shops

As identified in Table 4, positive licensing systems for vape shops are not in place across Canada, although there are some requirements for registration. In all provinces, vaping products can be sold in any retail outlet, although some products (flavours, higher nicotine) are restricted to specialty stores in some provinces. As presented in Table 5, some municipalities jurisdictions do require registration or licensing of vape stores.

## Age-restrictions of specialty vape shops

Provinces which permit specialty vape shops to display advertising and/or products require that no minors be permitted in these stores. Illustrations of signage on specialty tobacco and vaping stores is shown in the figure below and comparisons with restrictions on other retail venues are shown in Table 10.

## C) RETAIL CONTROLS ON OTHER POTENTIALLY HARMFUL PRODUCTS

Tobacco products are not the only addictive and harmful product legally sold in Canada. Generally speaking, Canadian jurisdictions have chosen to take a product-specific approach to problem substance use (tobacco, alcohol, cannabis, cocaine, etc), and have not sought to establish a coherent public law approach to these goods.<sup>149</sup>

### Alcohol

Canadian governments remain heavily involved in the distribution and retail of alcohol. The purchase of alcohol in Canada can only be made through licensed retailers or licensed hospitality venues. Each province has authority over the licensing systems, and the rules vary considerably from one province to another.<sup>150</sup>

Retail policies for alcohol include measures not yet in place for tobacco in Canada, such as minimum pricing laws in some parts of the country,<sup>151</sup> government monopolies in many provinces, and a moratorium on new liquor licences for private outlets in British Columbia.<sup>152</sup> At least one province has launched an e-commerce portal for alcohol.<sup>153</sup>

Alcohol outlet density, if bars and restaurants are included, is greater than for tobacco retailers. In Ontario, for example, there were almost twice as many licensed alcohol outlets as registered tobacco outlets in 2014-2015 (19,388 vs. 10,000).<sup>154 155</sup> Density of liquor stores (not including beer or wine sales outlets) is considerably lower than for tobacco, with around 3,000 liquor stores across the country. Even with this relatively small number 90% of Canadians live within 10 kilometers of a liquor store, one quarter population lives closer than 5 km from a liquor store and the average distance is 5.4 kilometers.<sup>156</sup>

156 Statistics Canada. Cannabis legalization: why proximity matters. October 23, 2018.

All provinces and territories in maintain government monopolies on wholesale distribution of alcohol, which is conducted through licensed wholesalers. In all but one province (Alberta) the government is the major retailer of alcohol in the province. Most provinces maintain full government retail monopolies on “hard liquor”, and many allow private distributors to sell wine and beer. None of the alcohol retail systems are managed by Ministries of Health: they report either to the ministry of finance, economic development or gaming authorities.<sup>157</sup>

In previous decades, government liquor stores did not engage in overt product promotions, as are now common. Generally speaking, there is no price promotion between liquor outlets in provinces where private alcohol retailing is not permitted although there is significant price dispersion between brands or types of alcohol products.

## Cannabis

The sale of recreational cannabis was made legal in Canada in the fall of 2018. Each province has regulated the wholesale and retail trade, adopting different approaches, as reflected in the table below, and municipalities and Indigenous governments may impose additional restrictions.<sup>158</sup> Several dozen Ontario municipalities, for example, passed resolutions opting out of having licensed cannabis retailers in their jurisdictions.<sup>159</sup>

A review of the retail market 6 months after legalization found that in addition to on-line retailing, there were 260 street-level cannabis retail stores present, of which 181 were privately-run stores, 55 were government-run stores and 24 stores were in the hybrid government-private retail system.<sup>160</sup> Three months later, in July 2019, the number of stores had increased to 407,<sup>161</sup> and the number is expected to grow. The Ontario government has expanded the number of potential retail outlets, reducing restrictions on producers to participate in retailing and permitting the sale of cannabis-related merchandise.<sup>162</sup>

Provincial laws and federal laws impose additional restrictions on the manner in which cannabis products can be sold. These are summarized in Table 12 below.

*Government liquor store, Manitoba, 1957<sup>1</sup>*

*Government Liquor Store, Ontario 2015*

### Municipal restrictions on Cannabis retailing.

A number of Canadian cities have adopted bylaws specific to cannabis retailers. Saskatoon, for example, has imposed requirements on size, parking spaces, location near schools and public facilities, and density restrictions.<sup>163</sup> Prince Rupert has set zoning boundaries for areas where cannabis sales are permitted (see figure below).<sup>164</sup>

### Cannabis retail licence fees:

Provinces which permit private-sector retailers take different approaches to retail licence fees:

- British Columbia charges an application fee of \$7,500, with an annual licensing fee of \$1,500 and a bi-annual security screening renewal fee.<sup>165</sup>
- Ontario charges a license fee of \$6,000 for a 2-year term, with a \$2,000 fee for two-year renewal. Retail store authorization fee is \$4,000. Managers are also required to be licensed, with a fee of \$750.<sup>166</sup>
- Alberta charges a \$400 non-refundable application fee with an additional \$700 annual licence fee. A deposit of \$3,000 is required for background checks and due diligence (unused amounts are refunded).<sup>167</sup> The City of Calgary charges a \$625 fee for planning approval.<sup>168</sup>
- Manitoba charges an application fee of \$500 is charged, with an annual licence fee of \$1,000.<sup>169</sup> Manitoba also charges retailers a wholesale mark-up (\$0.75/gram), a 9% mark-up, as well as Social Responsibility Fee on annual revenues.<sup>170</sup>
- Saskatchewan collects a selection process fee of \$1,000, plus a permit application fee of \$2,000 and an annual permit fee of \$3,000 for retail stores located within cities and \$1,500 for others.<sup>171</sup>

Municipalities also levy retail licence fees on cannabis outlets.

- Saskatoon levies a \$20,000 initial licence fee, with an annual renewal fee of \$10,000 for cannabis retailers.<sup>172</sup>

## Cannabis wholesale distribution

In 5 provinces, cannabis wholesaling and retailing is managed by government-owned agencies (see Table 11 below). Of the 5 provinces which allow private-sector retailing, 3 manage the wholesale distribution:

- The government-owned Ontario Cannabis Store is the only wholesaler of legal recreational cannabis in Ontario.<sup>173</sup> This structure is opposed by cannabis producers.<sup>174</sup>
- In British Columbia, wholesale distribution is exclusive to a branch of the BC Liquor Distribution Branch.<sup>175</sup>

By contrast, Newfoundland and Labrador, Alberta and Saskatchewan permit competition among private sector wholesale distributors.

## Record-keeping responsibilities.

As a method to reduce illegal sales, the federal Cannabis Tracking System Order<sup>176</sup> requires retailers that are licensed by provincial governments to provide the provincial licensing authority with monthly reports on sales. These are administered by provincial licensing authorities.

173 Ontario Cannabis Store. About Us.

## Restaurants

In addition to food-safety regulations, permits to serve alcohol and other business licensing requirements, some provinces have introduced oversight on the business operations of restaurants. In response to concerns about tax avoidance, the Quebec government introduced a mandatory billing (receipting) program for all restaurants, bars and catering events. This requires restaurants to provide a receipt with each sale, and to have their cash registers electronically linked via a “sales recording module” with a government server. The price of the unit is \$1,160,<sup>188</sup> and the program was implemented with a budget of \$55 million.<sup>189</sup> Recording devices are implemented in some Canadian retail venues by private data collectors, such as Nielsen Scantrack<sup>190</sup> and IRI Aztec basketview.<sup>191</sup> As mentioned above, they are also required by First Nation and On Reserve vendors of tax-free tobacco in Saskatchewan.

One model of a sales recording module required by all restaurateurs in Quebec

## Pharmacies

The federal government controls what drugs can be manufactured or sold in Canada. Therapeutic medicines, medical devices, vitamins, and cosmetics are reviewed by the federal health ministry before permitted for sale. The review and licensing requirements for products differ in response to the level of risk associated with their use. Federal law also controls who can make, label, import, distribute or wholesale these products. There is a federal price review system to ensure that prices are not “excessive”.<sup>192</sup>

Provincial governments are responsible for the licensing of pharmacists. The systems in place vary somewhat between provinces, but some, like Ontario, and use both legislative and spending power to influence the price of drugs and the services available at pharmacies.<sup>193</sup> Internet offerings for prescription drugs are commonplace, although the sale is banned in all provinces unless based in licensed pharmacy with a street address.<sup>194</sup>

## Postal services

Canada Post is the national postal service and remains the country’s primary postal operator. It is a crown corporation which operates a mixed system of 3,700 corporate-owned outlets and 2,500 dealer-managed (franchise) outlets. It provides universal service, providing some subsidy for service in rural and remote areas. Canada Post was the sole authorized distributor of medical marijuana, which was recognized by the Task Force on Marijuana legalization and Regulation as providing “reliable, low-cost delivery to all parts of the country in a discrete manner that does not encourage increased usage.”<sup>195</sup> Canada Post, in compliance with

## PART 2: TOBACCO RETAIL STRUCTURES IN OTHER COUNTRIES.

### A) EUROPE

Some aspects of tobacco control in the European Union are governed by the EU Directive, which was last updated in 2014.<sup>200</sup> Other than measures related to cross-border sales, the directive leaves to national governments decisions on whether or not (or how) to license tobacco retailers. The influence of the EU directive is also felt in some of the countries which are not members of the European Union but which have adopted EU-style legislation, i.e. Norway. Although the EU is a free trade area, the European Court of Justice has rejected challenges which would have forced countries to relinquish retail and distribution monopolies for tobacco.<sup>201</sup>

The EU Directive addresses tobacco retailing only in connection with measures to address cross-border sales. In all other respects, the manner of retailing is left to the discretion of each national government. The exclusion of tobacco from the WTO commitments of several EU countries with respect to trade in retail and wholesale distribution is reflective, perhaps, of the desire of European Countries to maintain their own tobacco retailing systems.<sup>202</sup> Among these are a variety of regulatory approaches.

#### State Monopolies

A number of European countries used to hold monopolies for the production and sale of tobacco products in western Europe, including Austria (Austria Tabak), Spain (Tabacalera), France (Seita), Italy (ETI), and Sweden. A number of Eastern European countries, before market liberalization, also maintained a closed tobacco economy managed by the state. In the last quarter of the 20th century these monopolies were gradually opened up for competition and eventually absorbed by multinational tobacco companies.

#### Austria

In Austria tobacco kiosks are called Trafikanten, and tobacco shops are tabak trafik. They operate under the authority of the *Tobacco Monopoly Act* of 1996<sup>203</sup> and are administered through the Monopolverwaltung GmbH.<sup>204</sup> In 2018 there were about 5,500 licensed tobacco outlets (not including vending machines),<sup>205</sup> of which 2,400 sell only tobacco and 3,100 are outlets that also sell other products. The population of Austria is about 8.86 million, giving a tobacco retail density of about 62 outlets per 100,000 population.

Tobacco licences have traditionally been issued with consideration of social objectives, and they are now preferentially given to those who suffer from some form of physical disability.<sup>206</sup> These licence holders must be European citizens. The locations must be approved and mandatory training is required. Tobacconists are restricted in the other types of goods they can sell and are not allowed to have other business dealings in

tobacco, or receive promotional discounts from manufacturers or distributors. The retail markup is set by the Tobacco Monopoly Law (53% of wholesale price, not including tax), and is reflected in an official price list.

## France

Tobacconists in France are officially called ‘débitants’, but are commonly known as ‘buralistes’, so named because they operate the ‘bureau du tabac’.

Buralistes operate under a monopoly retail licence system which is established under the authority of French tax law,<sup>207</sup> and administered by the French revenue ministry (Directorate-General of Customs and Indirect Taxes/Douane et droits indirects).<sup>208</sup>

Buraliste licences are issued for a three-year (renewable) term. There are a number of long-standing conditions on who may hold a licence: they may not be issued to commercial corporations, but only to individual natural persons who are European citizens. An individual may only hold a licence for one location, and this location must be approved by government.

Manufacturers are forbidden from offering incentives to retailers to promote or sell cigarettes.<sup>209</sup>

The licence fee is set annually as a percentage of revenues over a base amount. In 2019 the fee was set at 19.92%.<sup>210</sup> France has a “one price policy” for each tobacco product:<sup>211</sup> the retailer mark-up is set at 9% and the retail price for each brand is published by government.<sup>212 213</sup> Buralistes are eligible for an end-of-service payment if they relinquish their licence under certain conditions,<sup>214</sup> and are offered incentives for diversifying their business.<sup>215</sup>

Typically, a buraliste operates a small bar (bar-tabac) or a news-stand which is also a source for stamps, local licences or other government forms. There are currently around 24,500 buralistes<sup>216</sup> serving a population of 66.9 million. Over one half (55.5%) operate as bar-tabac, serving both alcohol and selling tobacco. Slightly

<sup>215</sup> Government of France. Le Portail de l’Economie, des Finances, de l’Action et des Comptes publics. Buralistes, diversifiez votre activité et obtenez des primes!

<sup>216</sup> Confédération des Buralistes.

less than one half (41%) are situated in communities with fewer than 3,500 residents.<sup>217</sup> There are no vending machines or other sources to legally purchase tobacco in France. The retail density, at 36 per 100,000 population, is believed to be the lowest in Europe.

In recent years, France has adopted a series of measures to reform tobacco retailing and the *buraliste* system. Some of these measures are designed to better align retail practice with health goals. These include banning promotional signs at retail, requiring all *buralistes* to receive initial training and refresher courses on health aspects of tobacco regulations, and increasing enforcement of sales to minors laws.<sup>218</sup> Other measures are designed to reduce the economic dependence of these retailers on tobacco sales. Among these are the use of these outlets as the basis for an informal electronic payment system, “*compte nickel*.”<sup>219 220</sup>

From a public health perspective, the *Buraliste* system is not considered to be successful. The system has been administered by the tax authorities with little or no input from health authorities, and the licencees have frequently, loudly and often successfully opposed tobacco control measures.<sup>221</sup>

The conflict between the historic role of the *buralistes* in support of tobacco sales and tobacco control objectives was recently identified by both the French Ministry of Health and the French Auditor General (Cour des comptes). In its 2016 Annual Report on tobacco control, the ministry raised concerns about the inconsistency of *buraliste* behaviour and government health goals: “The *buraliste*’s trade is in a state of upheaval and its role is now questioned ... As an agent of government, it is important that they serve the people by selling products and services that are useful to society.”<sup>222</sup> In its 2017 report, the Cour des comptes echoed the view.

With regard to tobacco retailing, the central objective of current public policy favours public health. Recent policy decisions seek to reduce tobacco consumption. At the same time, various programs of support for tobacco retailers are being developed and implemented by the Customs Authority or the Ministry of the Economy and Finance, in close collaboration with the tobacco retailers’ association (*Confédération des buralistes*) that co-manages some of the programs. The Ministry of Health is absent from these processes.

This lack of cohesion in public policy results in inappropriate support to the tobacco retailing profession. The system needs to be completely rebuilt.<sup>223</sup>

The subsequent iteration of the French tobacco control strategy identifies activities to strengthen the public health component of *Buraliste* training (mostly focused on sales to minors and smoke-free environments) and to participate in the annual transformation of 2,000 retailers away from tobacco sales.<sup>224</sup>

The French revenue ministry hosts an open data portal (<https://www.douane.gouv.fr/la-douane/opendata/categories/tabacs-manufactures>) on which the official price list, addresses of *buralistes* and sales data are available for download.

## Hungary

Hungary re-established state control on tobacco retailing in 2013, requiring that retail licences be administered through the state-owned company, ND Nemzeti Dohánykereskedelmi Nonprofit Zrt, “ND Zrt.” The move was criticized by some,<sup>225</sup> yet recognized as progress by the World Health Organization.<sup>226</sup>

The new licences were issued after a tendering process, during which Licencees were asked to demonstrate how access to young people would be prevented (such as prohibiting entry to those under 18). (The law was successfully challenged in European law by a former tobacconist, and the government was required to pay 21,000 euros in compensation).<sup>227</sup>

Conditions of licence included having a separate entrance, without being visible from the outside and offering a limited selection of non-tobacco goods (gambling games, alcoholic drinks, energy drinks, coffee, mineral water, soft drinks, newspapers and magazines).<sup>228</sup> Locations must be approved, and density is considered before a licence is issued. Children may not enter the stores.

Vending machines are banned. Although about 42,000 tobacco retailers had previously been operating, licences were issued to about 5,500 national tobacco shops and 500 “substitutes” in small communities, and roughly 6,000 were in operation in 2018.<sup>229 230</sup> With a population of 10 million, the tobacco retailer density was about 60 outlets per 100,000 population. Retailers are obliged to receive annual training through e-learning organized by a regulator.<sup>231</sup> In 2020, it was reported that the law had been changed to reduce the threshold for new licensees to one store per 4,000 from 3,000.<sup>232</sup>

Since 2018, these stores have also had a monopoly on the sale of e-cigarettes.<sup>233</sup> The monopoly maintains a web-site for licensed retailers, on which additional information can be found.

## Italy

In Italy, tobacconists (tabacchi) are licensed by a branch of the Italian Finance Ministry (Amministrazione autonoma dei monopoli di Stato, AAMS)<sup>234</sup> and operate under the Law of 26 Ottobre 1995, no. 504.<sup>235</sup> Two categories of licenses are issued (tobacco shops and special outlets), with differing conditions for issuance,

but in both cases only natural persons who are European citizens may be licence holders. The retail markup (10%) is set by the government,<sup>236</sup> and is reflected in an official price list.<sup>237</sup>

There are density restrictions for tobacco shops which vary depending on the size of the communities (in cities with more than 100,000 people, the shops must be at least 200 metres apart). Vending machines are permitted in Italy, with electronic cards use as proof of age.<sup>238</sup>

There are 54,700 tabacchi, with an additional 9,900 outlets (not including vending machines),<sup>239</sup> serving a population of 60.6 million. The retail density is 105 outlets per 100,000 population.

## Spain

In Spain, tobacconists (estanco) are licensed by the Comisionado para el Mercado de Tabacos on behalf of the Ministry of Finance and Public Administration<sup>240</sup> under the authority of a 1998 law<sup>241</sup> and subsequent regulations.<sup>242,243</sup> Three-year licences are issued after public tender or auction and are renewable. Annual licence fees depend on the population and turnover.<sup>244</sup> The locations must be approved, and density and proximity to educational centres is a consideration. The minimum distance between licence-holders is 150 m.<sup>245</sup>

There are three categories of licence holders (press kiosks, bars and restaurants and hotels). Licences are restricted to natural persons who are European citizens, and who live in the community. Licencees may not have another line of business and may not have any business relationship with other tobacco dealings. Retailers are prohibited from promoting certain brands to customers. The retail markup is set by the government (9% on cigarettes) and is reflected in an official price list.<sup>246</sup>

<sup>245</sup> Valiente, et al. Regulating the local availability of tobacco retailing in Madrid, Spain: a GIS study to evaluate compliance. Tobacco Control. July, 2018.

<sup>246</sup> Lista Precios.

There are an estimated 13,500 estancos as well 134,900 other retail outlets, <sup>247</sup> in addition to an estimated 150,000 vending machines. <sup>248</sup> With a population of about 46.7 million people, the density of tobacco retailers is about 317 outlets per 100,000 population, exclusive of vending machines.

## Notable developments in other European countries.

### Czech Republic

In 2015, when revising its tobacco control laws to bring them into line with the EU Directive, the Czech government considered the option of limiting the sale of tobacco products “to specialised outlets whose operation would be subject to a permit (licence) and persons under 18 years of age would be prohibited from entering these outlets as is the case e.g. in Hungary.” It rejected this operation as “the impact ...on the business environment would be too severe and would likely be unfeasible in the short term.”<sup>249</sup> Instead it adopted restrictions on the types of venues where cigarettes could be sold, and banned them in schools and other places where young people were present.<sup>250</sup>

### Estonia

A WHO-Joint National Capacity Implementation review of tobacco control in Estonia in 2011 called for a licensing system that could be used for “limiting hours and or days of sale; restricting the location, density and types of outlets; mandating seller training and licensing; and implementing seller liability, including loss of licence following breaches of licensing conditions.”<sup>251</sup>

Although the law that was subsequently passed did not adopt a licensing system, it did impose restrictions on retail, including bans on sales in pharmacies, hospitals, schools, or several categories of youth-oriented places and Bans on vending machines, street level sales. In addition, it imposed on retailers the “obligation of undertaking to cooperate”, by which retailers are required to receive and display publications from government and non-governmental organizations that promote non-smoking.<sup>252</sup>

### Finland

Since 2008, retailers in Finland have required a specific licence to sell tobacco product under the authority of its *Tobacco Act*.<sup>253 254</sup> In 2016 the law was revised to permit the municipalities which issue these licences to charge fees to offset the costs of monitoring compliance with the law – the fees. The maximum fee is EUR 500 (or EUR 1000 if nicotine products are also sold), and can be assessed on the point of sale, i.e. per cash register. Licences may not be issued in certain areas (areas where children are present or schools). The state licensing body, Valvira, is responsible for the administration of this licensing system and for maintaining a register of licensed retailers.<sup>255</sup> Finnish media report that some retailers are paying EUR 12,000 per year for retail licences.<sup>256</sup>

253 Finland. Tobacco Act (549/2016). .

254 Finland. Ministry of Social Affairs and Health. Questions and answers on the new Tobacco Act.

255 Finland. Valvira. National Supervisory Authority for Welfare and Health.

256 Finland. Lansivayla. January 1, 2017. Valvontamaksut nousevat tuhansiin euroihin – "Jos tupakoitsijat eivät ostaisi ruokaa, tupakanmyynti kannattaisi lopettaa kokonaan"(  
Surveillance fees rise to thousands of euros - "If smokers would not buy food, tobacco sales should be stopped altogether").

Valvira reports that although the number of licences was stable between 2008 and 2016, it has fallen by “around 1,500.” With the current number of retailers around 8,700 in 2017<sup>257</sup> and 7,250 in October 2018,<sup>258,259</sup> the reduction was about 15% in the first year of the fee, with continued decrease. A public register of retail licences and wholesale notifications is maintained.<sup>260</sup>

Retailers must appoint one person to be responsible for plan to self-monitor compliance with the regulations, and a formal self-monitoring plan is required of each retailer. This plan must address training of new employees, age verification methods, etc.<sup>261</sup>

## Gibraltar

Gibraltar requires the licensing of tobacco retailers.<sup>262</sup> The issuance of new licences is discouraged.<sup>263</sup>

## Iceland

Iceland maintains state control of tobacco wholesaling, distribution of tobacco to retailers is done through the State Alcohol and Tobacco Company of Iceland, also known as Vinbudin.<sup>264</sup> Regulations direct the agency Vinbudin in its selection of products for distribution.<sup>265</sup> The wholesale price list is publicly available.<sup>266</sup>

Icelandic law provides for retail licensing from the regional board of health and allows local authorities to collect fees for such permits.<sup>267</sup>

For retail sale of tobacco, a special permit is required from the board of health of the relevant region. For operation of a specialist tobacco shop, a special permit is also required from the board of health of the relevant region. A specialist tobacco shop shall be especially distinguished. A permit under this article shall be granted for a term of four years and will only be granted to individuals or businesses who/which fulfill the general requirements of legislation on commercial employment.

Local authorities are permitted to collect a fee for permits and for monitoring the activities of permit-holders, on receipt of recommendations from boards of health. Such fees shall be in accord with the *Health and Pollution Control Act*.

The Minister may, in consultation with the Minister for the Environment, issue regulations (Reg. 325/2007) stating further provisions on the granting of permits under this article, inter alia the fittings of specialist tobacco shops, how such shops are to be distinguished, and how tobacco and tobacco trademarks may be placed at retail outlets and in specialist shops.

## Ireland

Since 2009, Irish law has banned the advertising or display of tobacco products by retailers and have required retailers to register with National Register of Tobacco Retailers.<sup>268 269</sup> The fee required to register is €50 per registrant. In 2018, the Health Services Executive reported that there were 13,195 retail outlets, of which the largest proportion were licensed premises.<sup>270</sup> With Ireland's population of about 4.8 million, there are 273 tobacco outlets (including bars, etc) and about 123 store-front retailers selling cigarettes per 100,000 population.

Figure: Number of registered tobacco retailers, Ireland 2018

In 2014, the Irish Ministry of Health issued a discussion paper which propose replacing the register with a licensing system.<sup>271</sup> The proposal was strongly opposed by retailers,<sup>272</sup> but in 2019 the Minister of Health received approval to draft legislation to “introduce a licensing system for the sale of (a) tobacco products and (b) nicotine inhaling products to include an annual fee per premise for the sale of such, in such a manner as may be determined by the Minister.”<sup>273</sup> Irish law prohibits price discounting, and also retailer incentive programs.<sup>274</sup>

## Lithuania

Lithuanian law requires the licensing of tobacco manufacturers, wholesalers and retailers, with retail licences issued by municipalities.<sup>275</sup> Licenses are not permitted in certain venues (pharmacies, internet cafés, educational establishments, etc.)

## Netherlands

In early 2020, the Netherlands legislature adopted a motion aimed at significantly reducing the number of retail outlets, with the goal of restricting sales to tobacco only age-restricted stores.<sup>276</sup>

## Norway

Tobacco retail licensing has been proposed, studied and endorsed by health experts for over a decade in Norway, yet was not specified included in the most recent strategy or legislation.<sup>277 278</sup> Among those calling for a retail licensing system were the Norwegian Institute for Alcohol and Drug Research (2002),<sup>279</sup> and a WHO-organized National Capacity Implementation review (2010).<sup>280</sup>

279 Philip Morris v. Norway. 10-041388TVI-OTIR/02. Oslo District Court. September 2012.

280 WHO. National Capacity Assessment for Tobacco Control – Norway. 2010

Features and process: The licensing system should consider: limiting hours and or days of sale; restricting the location, density and types of outlets; mandatory seller training and licensing; and seller liability, including loss of licence following breaches of licensing conditions. ...

Principle: This policy is based on a central concern to send an unambiguous public signal that the government regards tobacco as an exceptionally harmful product, deserving of restrictions on retail sale at least comparable to those that apply to prescribed pharmaceuticals in most countries and to alcohol products in Norway.

In June 2017, Norway adopted regulations requiring retail outlets to be registered, and authorizing municipalities to set fees to cover their inspection costs.<sup>281 282</sup> After January 1, 2019, regulators were authorized to charge an annual fee of NOK 4,580 (CAD 659) for retail outlets and NOK 1,220 (CAD 175) for temporary outlets.<sup>283</sup>

## Slovenia

Slovenia passed its new tobacco control law in January 2017. Among its provisions are requirements that Vendors be licensed by the Health Ministry. These licences, issued on a 5 year renewable term, are linked to a specific location. The Ministry can reject applications, and the licences can be withdrawn or suspended for activities which break other provisions of the tobacco control law.<sup>284 285</sup> Slovenia makes public a list of authorized licence holders.<sup>286</sup>

## Sweden

Sweden revised its tobacco laws in 2018 and introduced compulsory licensing for retailers and wholesalers. Sales permits are issued by the municipality, which has the responsibility and authority to review the suitability of the application and to assess a licence fee.<sup>287</sup>

## United Kingdom

The retail environment for tobacco products in the United Kingdom is similar to that in Canada: a display ban is in effect (phased in between 2012 and 2015)<sup>288</sup> and the sector is adjusting to a plain packaging environment. As in Canada, U.K. retailers have access to dedicated retailer websites, which they are incentivized to use<sup>289</sup> and which facilitate access to other incentives.<sup>290 291</sup> The terms and conditions of JTI's reward website suggest that rewards include cash and gift cards.<sup>292</sup>

The United Kingdom has devolved some authorities to governments in Scotland, Northern Ireland and Wales, and in the first two tobacco retailers are required to register.

- 292 Japan Tobacco.

- Retailers in **Northern Ireland** were required to be registered by April 6, 2016. There is no cost to registration.<sup>293</sup>
- A retail registration for tobacco was implemented in **Scotland** in 2011 and extended to nicotine vapour products in 2016 (deadline to register was 2017). There is no cost to register.<sup>294 295</sup> The register was evaluated by Cancer Research UK in 2017.<sup>296</sup> The Scottish Tobacco Control Action Plan of 2018 included a commitment to “Considering legislating to introduce conditions for registration or licensing of retail.”<sup>297</sup>
- The **Welsh** government passed legislation in July 2017 to require a registry of tobacco and nicotine product retailers. The bill gives government the power to set fees for registration.<sup>298</sup>
- In 2016, the **United Kingdom Revenue and Customs ministry** released a consultation paper that considered retail registration as part of initiatives to address illicit trade.<sup>299</sup> A summary of responses was made public in November 2017. The government’s position articulated in that response was that retailer licensing was not justified as an anti-illicit trade measure.<sup>300</sup> The U.K. Ministry of Health does not include any licensing provisions in its 2017-2022 Tobacco Control Plan.<sup>301</sup>

There are an estimated 10,000 tobacco retailers in Scotland,<sup>302</sup> representing about 185 retailers for every 100,000 population. In 2012 there were 56,000 reported in England, representing about 100 tobacco outlets for every 100,000 people.<sup>303</sup>

## B) THE UNITED STATES

Tobacco retail reform has been a subject of active research and policy development in the United States. The following information has been taken from reviews by health organizations which focus their activities on tobacco retail reform.<sup>308 309 310 311</sup>

Nowhere in the United States is there a “dark market” for tobacco products, where the display of tobacco products are not permitted for sale, and where promotions are not visible at retail. Tobacco retail conditions are set by state and local governments.

The estimated number of tobacco retailers in the United States (375,000) for a population of 3.24 million people suggests an overall density of 115 retailers for 100,000 people.<sup>312 313</sup> The concentration of retailers has been found to be more intense in areas which are home to more poor people, more African Americans, or other disadvantaged groups. Geo-mapping of retailers has been completed in many U.S. municipalities.

Tobacco retail reform has been a subject of active research and policy development in the United States. There have been more than 100 studies on tobacco retailer density in the United States, and sustained monitoring of the retail environment at a level unknown in other countries.

Policy priorities identified as consensus goals include increasing licence fees, restricting sales in youth locales, minimum legal sales age for e-cigarettes and bans on self-service display bans for e-cigarettes and other tobacco products. Ending sales in pharmacies is encouraged as a voluntary measure for large pharmacy retailers, and is in place as a regulatory measure in several municipalities in Massachusetts and California. Measures that are implemented in Canada, Australia and elsewhere (such as prohibitions on product displays and other advertising restrictions) are considered to be not feasible by many U.S. tobacco control analysts.<sup>314</sup>

A predominant feature of U.S. health proposals is to focus on measures that can be adopted by and implemented by local governments, such as zoning laws. Non-tax pricing controls (such as prohibiting price discounting) are also proposed as municipal-level reforms for U.S. cities. There are constitutional limits on local regulation, as shown by New York’s defeat in requiring mandatory posting of graphic health warning messages.

### Municipal regulations

#### Reducing density

- San Francisco adopted a Tobacco Retail Density Policy<sup>315</sup> with the goal of reducing the number of tobacco sales by about half to 495 (from about 1000).<sup>316</sup> With a population of about 870,000, the pre-implementation density was 121 retailers per 100,000, and the goal (presuming no population growth), will be 60 per 100,000 people. San Francisco also imposes a litter abatement levy of \$1.00 per package.<sup>317</sup>

317 San Francisco Treasurer. Cigarette Litter Abatement Fee

In addition to providing revenue, this also provides information on neighbourhood level sales of tobacco products.

- Other California municipalities have limited tobacco retailers to 1 per 2,000 residents (Sonoma County) or 1 to 4,000 for specialty tobacco retailers (Oroville). This is the equivalent of 50 and 25 per 100,000 people.<sup>318</sup>
- Philadelphia adopted measures, effective in January 2017, to reduce retail density to 1 retailer per 1,000 people and to prohibit new tobacco retail outlets within 500 feet (150 meters) of a primary or secondary school.<sup>319</sup> The goal is equivalent to a retailer density of 100 outlets per 100,000 people.
- New York City adopted a series of retail-related measures in August 2018 which included a cap on the number of tobacco retailers and reducing this number through attrition to 50% of the current number in each electoral district.<sup>320 321</sup> The City estimates there are 8,300 current licensees for a population of 8.54 million, giving a density of 97 retailers for 100,000 population.<sup>322</sup>
- California communities which require a minimum distance between tobacco retailers include Palo Alto (500 feet), Huntington Park (200 feet), Benton county (1,000 feet).<sup>323</sup>

#### **Limiting proximity to children's places**

- The Cities of Bishop (California) and Renville County (Minnesota) prohibit tobacco retailers from operating within 1,000 feet of schools, playgrounds, houses of worship and other youth-oriented facilities.<sup>324</sup>

#### **Prohibiting sales in certain venues**

- In Canada all but one province has banned the sale of tobacco products in pharmacies and all have banned sales in health institutions. In the United States, such restrictions are more commonly included in municipal licensing bylaws.<sup>325</sup>

#### **Prohibiting tobacco sales.**

- In June 2019 Beverley Hills, California, approved an ordinance to prohibit the sale of tobacco products in the city, starting January 1, 2021.<sup>326</sup> (The sale of flavoured tobacco was already forbidden.)<sup>327</sup>

#### **Pricing**

Some municipalities have included “floor prices” in their retailer licensing systems:

- **Sonoma County** (California) adopted a tobacco retailer licensing ordinance in 2016 that set a minimum price of \$7 for cigarettes for retailers in unincorporated areas of the county. Other California counties followed suit in 2017 and 2018.<sup>328</sup>
- **New York City** prohibits tobacco retailers from redeeming coupons, multi-pack deals or other price reduction promotions, and also sets a minimum pack size and price for little cigars.<sup>329</sup>

### Transparency

- **New York State** makes public the list of active tobacco retailers. In 2019 there were 18,219 retailers and an estimated population of 19.54 million, giving a retail density of about 93 retailers for 100,000<sup>330</sup>

**Table 14: Retail tobacco policies monitored by ASPIRE<sup>331</sup>**

Policy Domains	Measure (shaded indicates already in place in most Canadian jurisdictions)
<b>Licensing &amp; Density</b>	<ul style="list-style-type: none"> <li>• establish or increase licensing fees</li> <li>• limit or cap total number of licences in a specific area</li> <li>• prohibit tobacco sales in youth locales</li> <li>• restrict retailers from operating within a certain distance of other retailers</li> <li>• restrict retailers in certain zones (e.g., residential zones)</li> <li>• prohibit tobacco sales in certain types of retailers (e.g., pharmacies)</li> <li>• limit number of hours or days for sales</li> </ul>
<b>Advertising</b>	<ul style="list-style-type: none"> <li>• limit the times (of day) when advertising is permitted</li> <li>• limit placement of ads at certain store locations (e.g., near youth locales)</li> <li>• limit placement of ads inside stores (e.g., near cash registers)</li> <li>• limit placement of outdoor ads</li> <li>• ban certain manners of advertising (e.g., outdoor sandwich board-style ads)</li> <li>• establish content-neutral advertising restrictions (e.g., 15% of window space)</li> </ul>
<b>Non-tax Price Increases</b>	<ul style="list-style-type: none"> <li>• establish cigarette minimum price laws</li> <li>• ban price discounting (e.g., specials, multipack options)</li> <li>• ban redemption of coupons</li> <li>• ban distribution of coupons</li> <li>• require disclosure of manufacturer incentives for retailers (i.e., sunshine law)</li> <li>• establish mitigation fees (e.g., for litter clean up, to cover cessation services)</li> </ul>

## C) SELECTED RETAIL INTERVENTIONS AND RETAIL LICENSING REQUIREMENTS IN OTHER COUNTRIES

### Argentina

Argentina's Products made from tobacco can only be sold and distributed in duly authorized shops. "Places for sale, exhibition, distribution and promotion of any kind of tobacco products intended for the public must have specific authorization for retail sale of tobacco products."<sup>332</sup>

### Australia

As in Canada, retailers are licensed by sub-national governments. Five of the 8 Australian states require tobacco retailers to be licensed, with annual licence fees from \$0 to AUD \$519.<sup>333</sup> Estimates of the number of tobacco retailers in Australia vary. One estimate was 35,000 retailers in 2004, down from an estimated 40,000 in 1997/1998.<sup>334</sup> Other estimates are as high as 52,000 in 2002.<sup>335</sup> In 2014, there were 13,400 tobacco retail outlets registered in New South Wales,<sup>336</sup> with an estimate of 10,000 in 2019.<sup>337</sup> (With an estimated population of 8 million, this represents 125 tobacco retailers in NSW per 100,000 people).

### Brunei Darussalam

In 2007, Brunei Darussalam adopted a regulation requiring licensing of importers, wholesalers and retailers.<sup>338</sup> The regulation prohibits sales of tobacco products by persons who are not holders of a retail licence. Separate licences are required for each outlet, for a fee of BND300. Since 2010, licences were not issued for retail shops in government buildings, markets, stalls, petro stations and within 1 km of a school.<sup>339</sup> Tobacco manufacturers are prohibited from offering incentives "in exchange for the promotion of a tobacco product".<sup>340</sup> There are reports that the legal market for cigarettes has been replaced with an informal market.<sup>341</sup>

### Ethiopia

Ethiopia's Tobacco Control Directive (2015) requires distributors to have a special licence issued by the Ethiopian Food, Medicine and Healthcare Administration and Control Authority.<sup>342</sup> The Directive also prohibits incentives issued by retailers to customers or by manufacturers to retailers. "payments or other contributions to any person who sale tobacco product to encourage or induce them to sell products, including retail incentive programs like rewards to tobacco product sellers for achieving certain sales volumes."

### Fiji

Fiji requires annual registration of wholesaler, distributors and retailers, including a separate registration for each retail location, and a separate registration process for sellers of local tobacco (suki). Registration fees

ranged from \$5.0 to \$25 per year. Registrations can be revoked following non-compliance with regulations.<sup>343</sup> It was reported in 2012 that 5,000 vendors had been registered,<sup>344</sup> giving a retail density of about 568 per 100,000.

## Guam

Guam requires that tobacco retailers be licensed by the revenue and taxation department, with an annual fee of \$40.<sup>345</sup>

## Korea

Korean law bans manufacturers offering retailers money or other considerations in return for promoting tobacco sales.<sup>346</sup> Retailers are required to be registered with their municipality, and the registration can be denied under certain circumstances, such as failure to comply with the law or where it is “deemed inappropriate for the business of selling tobacco”. Retailers must conform with a registered selling price for each brand.<sup>347</sup>

## Maldives

Tobacco sellers in the Maldives are obliged to have a licence issued by the Ministry of Health.<sup>348</sup>

## New Zealand

New Zealand currently has no licensing programs for tobacco retailing, nor does it restrict where tobacco can be sold. There are an estimated 6,057 tobacco retailers, suggesting a retail density of 126 per 100,000 population.<sup>349</sup> Manufacturers are prohibited from offering retailer incentive programs. (*“No person may offer, to any retailer, any gift or cash rebate, or the right to participate in any contest, lottery, or game, as an inducement or reward in relation to— (i) the purchase or sale of tobacco products by that retailer; or (ii) the advertising of tobacco products inside that retailer’s place of business; or (iii) the location of tobacco products in a particular part of that retailer’s place of business.”*)<sup>350</sup>

## Palau

Palau requires the licensing of retailers, with an annual fee of \$50.00.<sup>351</sup> Retail distribution by mail order or internet sales, within sports or educational facilities, or in ways where the consumer can handle the product before sales is prohibited. The minimum age for sale is 21.

## Thailand

In April 2017, the Thai government published a new *Tobacco Products Control Act*, which was implemented in July 2017. Among its provisions were several restrictions on tobacco retailing, such as prohibiting sales to persons under 20 years of age, bans on vending machines, electronic sales, display of “reduction of tobacco product place”, give-away of other items with tobacco sale, etc.<sup>352</sup> The law also includes in the prohibited
