

Frequent exposure to second hand smoke in public places Canada, 2011

Key findings

- The number of non-smoking Canadians who report being exposed to second hand smoke in the past month fell dramatically between 2003 and 2008, but has increased significantly since then.
- The number of non-smoking Canadians who report being exposed in public places has fallen by about 1 million people from 2003 to 2011.
- In 2012, about 1 in 8 non-smoking Canadians reported having been exposed to second hand smoke daily in the past month
- The age group most likely to report being exposed either in public places is young Canadians aged 12-19. The rate of exposure for this group (22.5) is almost twice as high as the national average.

Distribution of non-smokers exposed to second hand in public places by age, 2011

Percentage of non-smokers exposed to second hand smoke in public places in past month, by age, 2011

Percentage of non-smokers in Canada reporting exposure to second-hand smoke in public places in past month, 2003-2011

NON-SMOKERS' EXPOSURE TO SECOND HAND SMOKE IN PUBLIC PLACES, PAST MONTH, 2003-2010

Percentage of non-smokers reporting exposure to second-hand smoke in public places in past month, 2010

Percentage of non-smokers in Canada reporting exposure to second-hand smoke in public places in past month, by province 2003-2011

The data on this fact sheet were derived from the Canadian Community Health Surveys (Cycle 2.1, 2.2 and 2007, 2008, 2009, 2010 and 2011) as provided by Statistics Canada.

Further information on survey methodology can be found at: <http://www.statcan.gc.ca/dli-ild/data-donnees/ftp/cchs-escs-eng.htm>

The questions used on the CCHS survey were:

- “In the past month, were you exposed to second-hand smoke every day or almost every day in public places (such as bars, restaurants, shopping malls, arenas, bingo halls, bowling alleys)?” (Yes/No)
